

VSS Scoreboard Overlay: Prototype v1

OBS Integration & Usage Guide

Prepared for: Varsity Media Foundation

Project: VSS Live Streaming Platform

Created By: Hsuan-Jun Lin

Last Update: Feb 16, 2026

Overview

This guide explains how to:

- Add the VSS Scoreboard Overlay into OBS
- Connect it to the Control Panel in local file
- Update scores live during broadcast
- Use the overlay for different sports type

Supported Type:

1. Football
2. Basketball
3. Lacrosse
4. Volleyball
5. Hockey
6. *Baseball (in development; the final version will use a separate, sport-specific scoreboard template).*

***The scoreboard is built as an HTML overlay and runs inside OBS using **Browser Source**.**

***This first prototype must run directly on a local device and is not configured for cloud deployment at this stage.**

Required Files

Before starting, make sure you have:

- **Scoreboard.html** (Version 3.0)
- **VSS_Scoreboard_Control_Panel.html** (Version 3.1)
- **config.json** (Initially empty; it automatically saves and updates local scoreboard data.)
- **Photo** Folder

Github Download Link - Prototype: [Scoreboard_Prototype_version3.0](#)

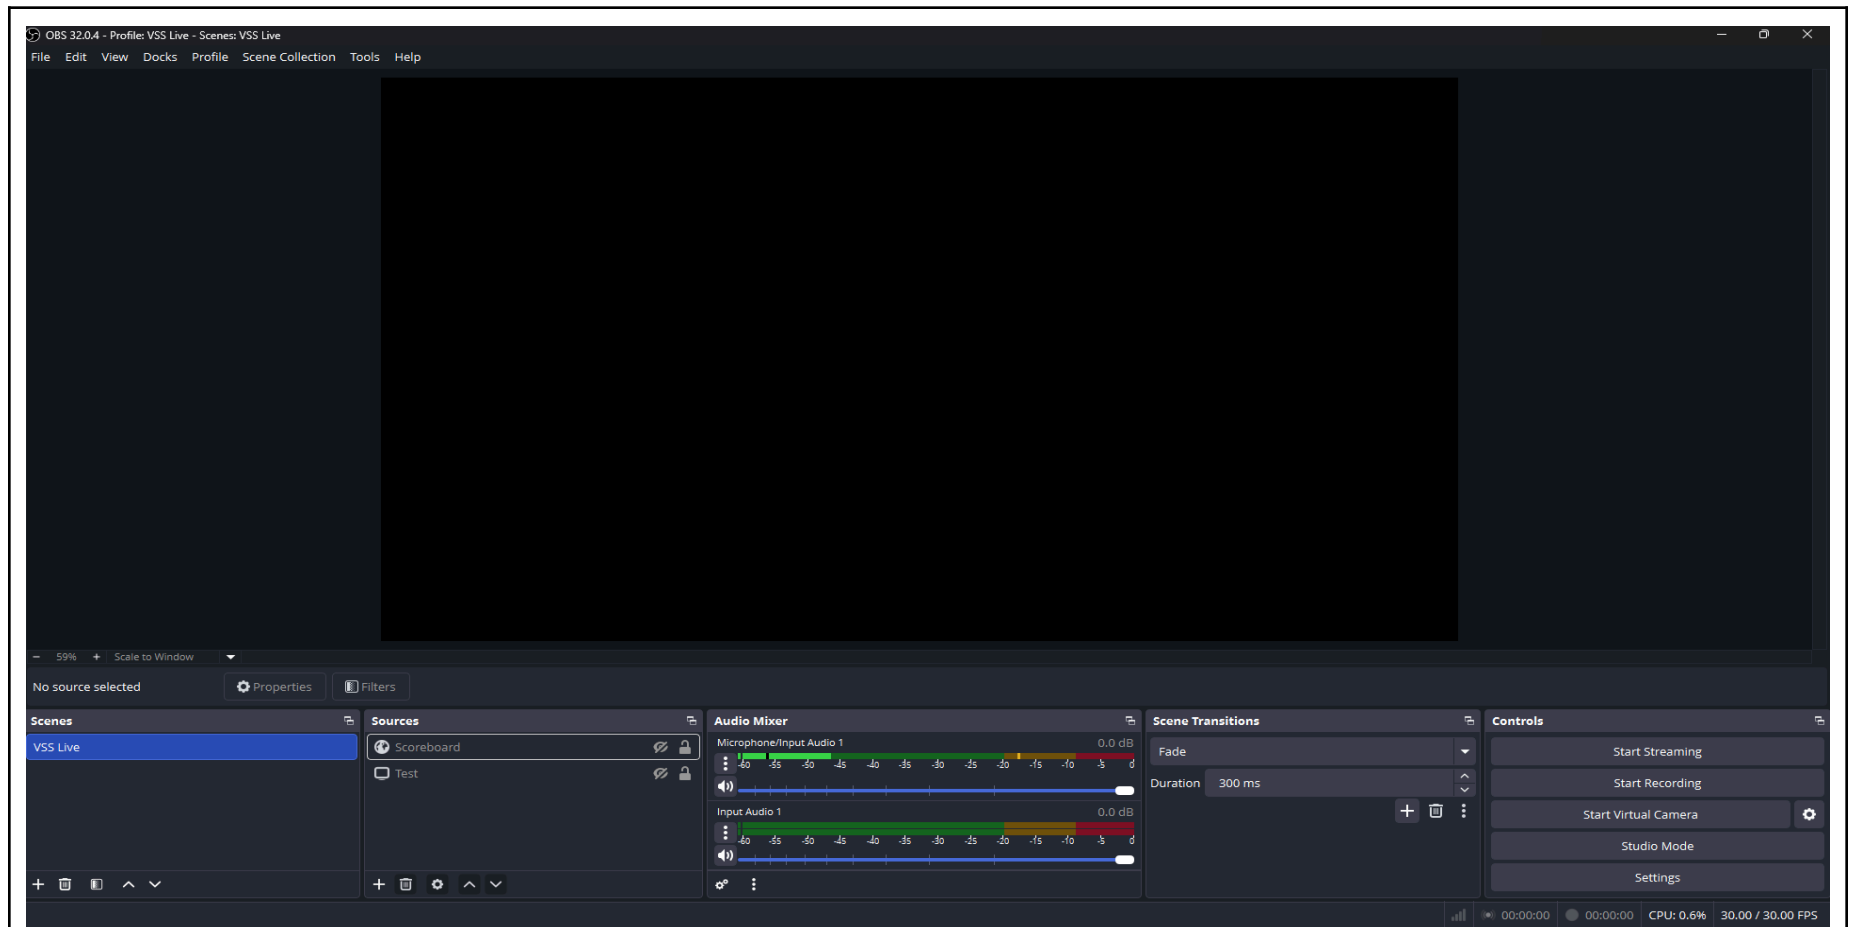

Update Scoreboard / Control Panel: [Github Update](#)

- **LTS3.1&3.3**
- **LTS3.2&3.4**
- **LTS4.0 New**

***Unzip the file from download, save the **VSS_Overlay** Folder to your designated location**

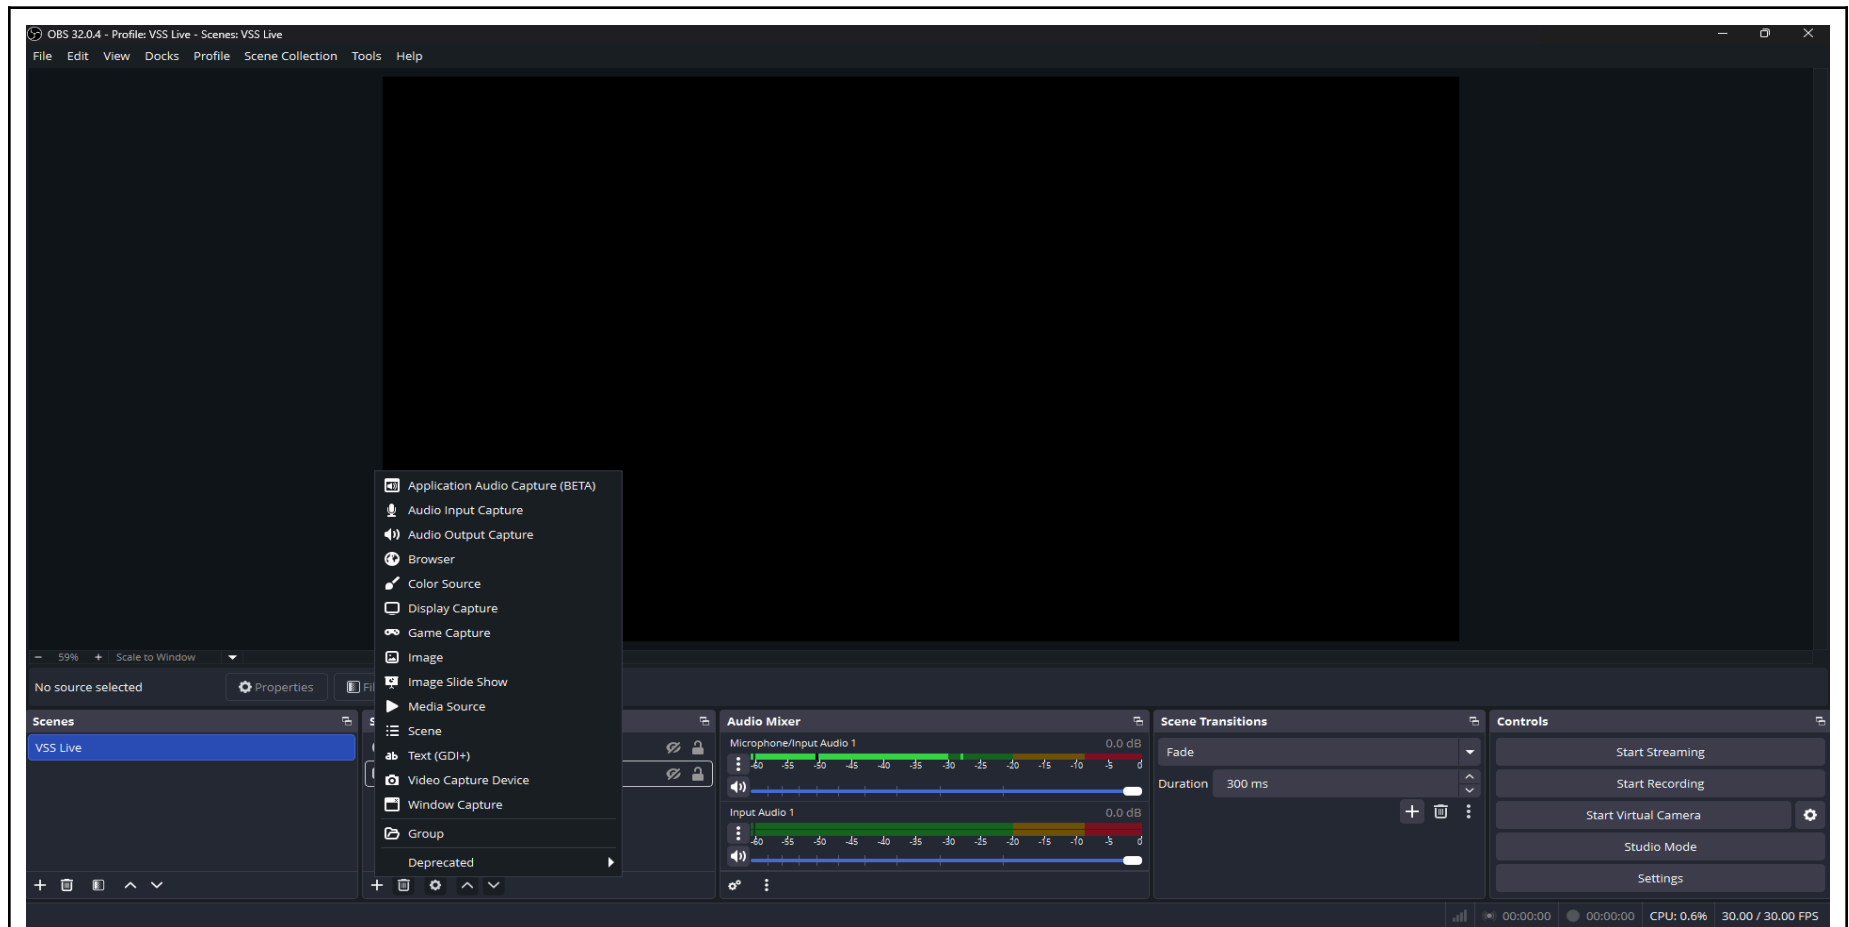

Adding Scoreboard Overlay in OBS

★Step1 - Open OBS

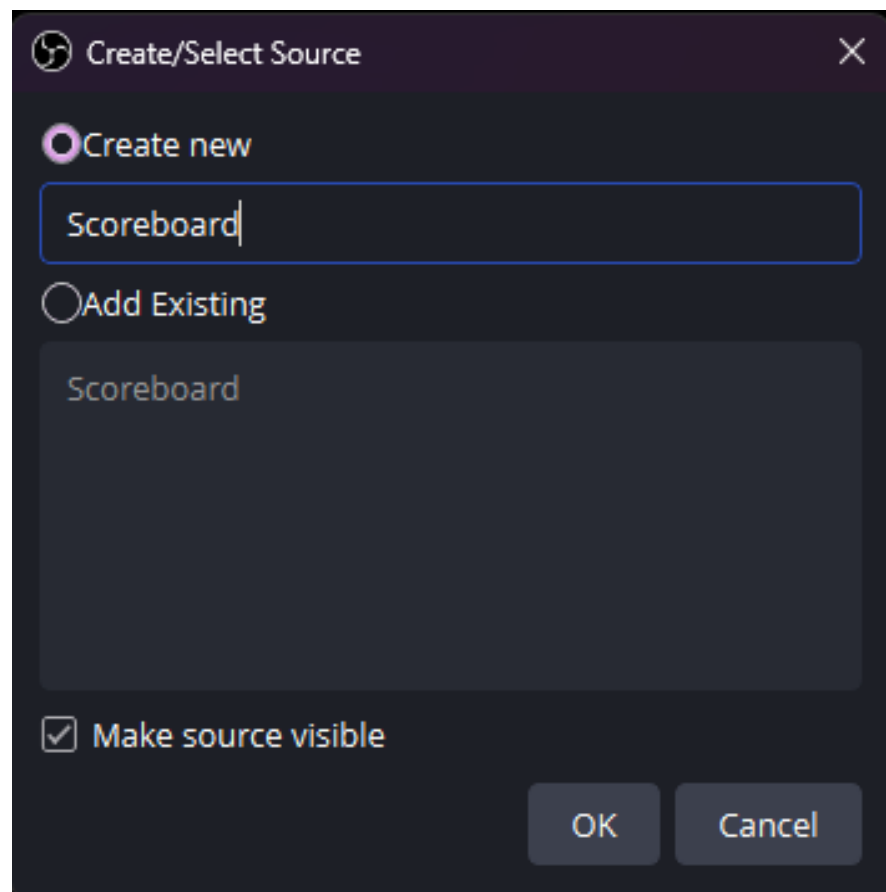

➤ *Launch OBS Studio*

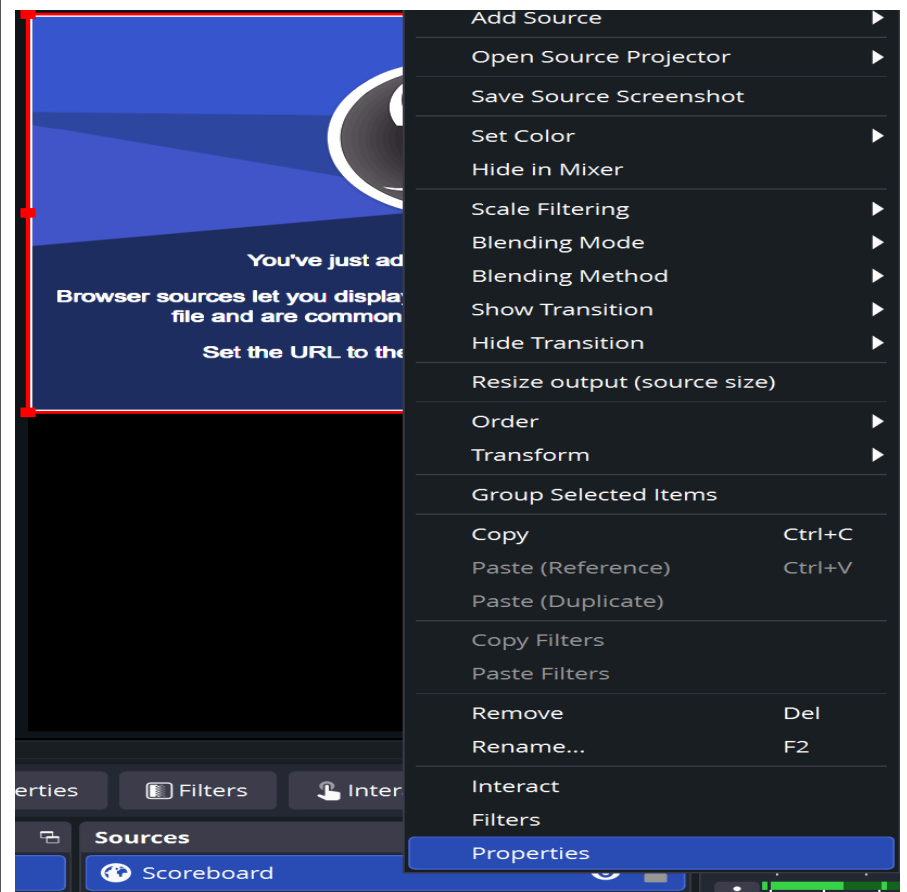

★Step2 - Setup Browser Source

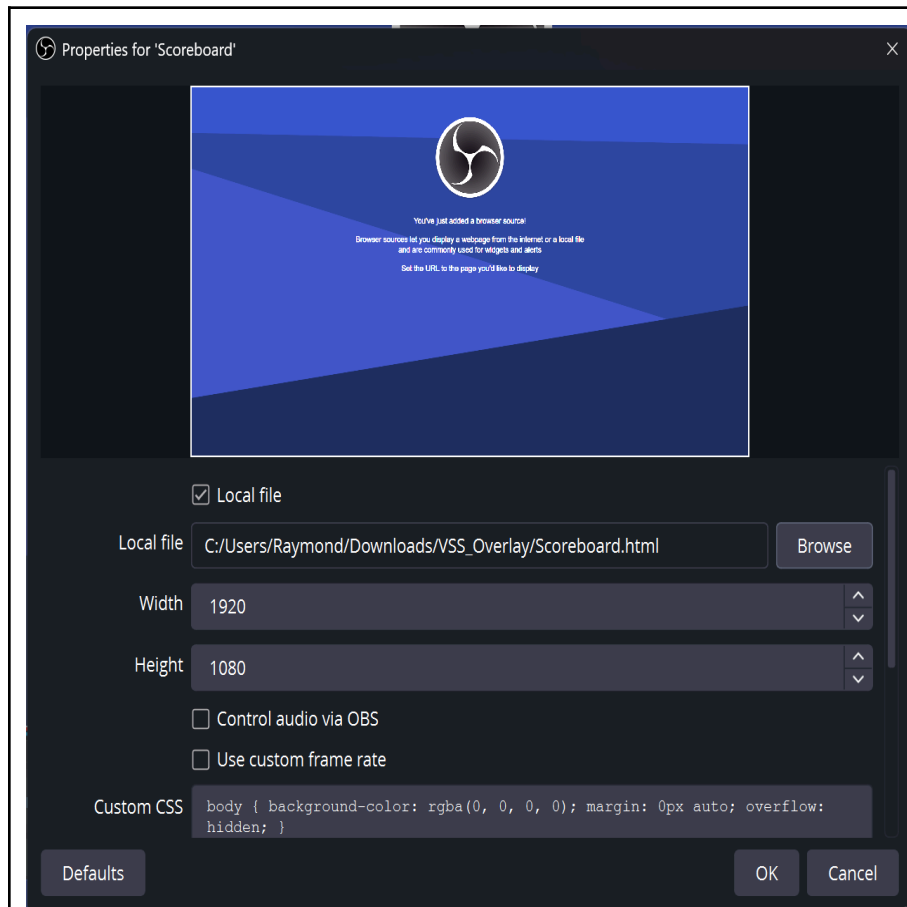

- In the **Sources** section, click the + button
- Select **Browser**

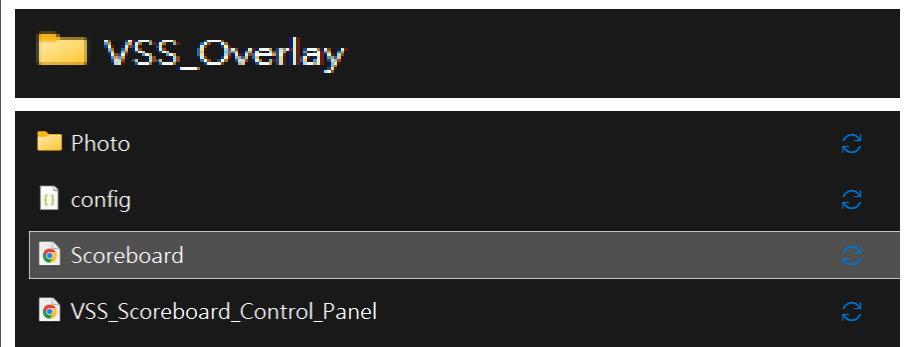

- *Rename the Source name to your preferred name (e.g., Scoreboard)*
- *Click **OK***

- *In the **Sources** section, right-click the source*
- *Select **Properties***

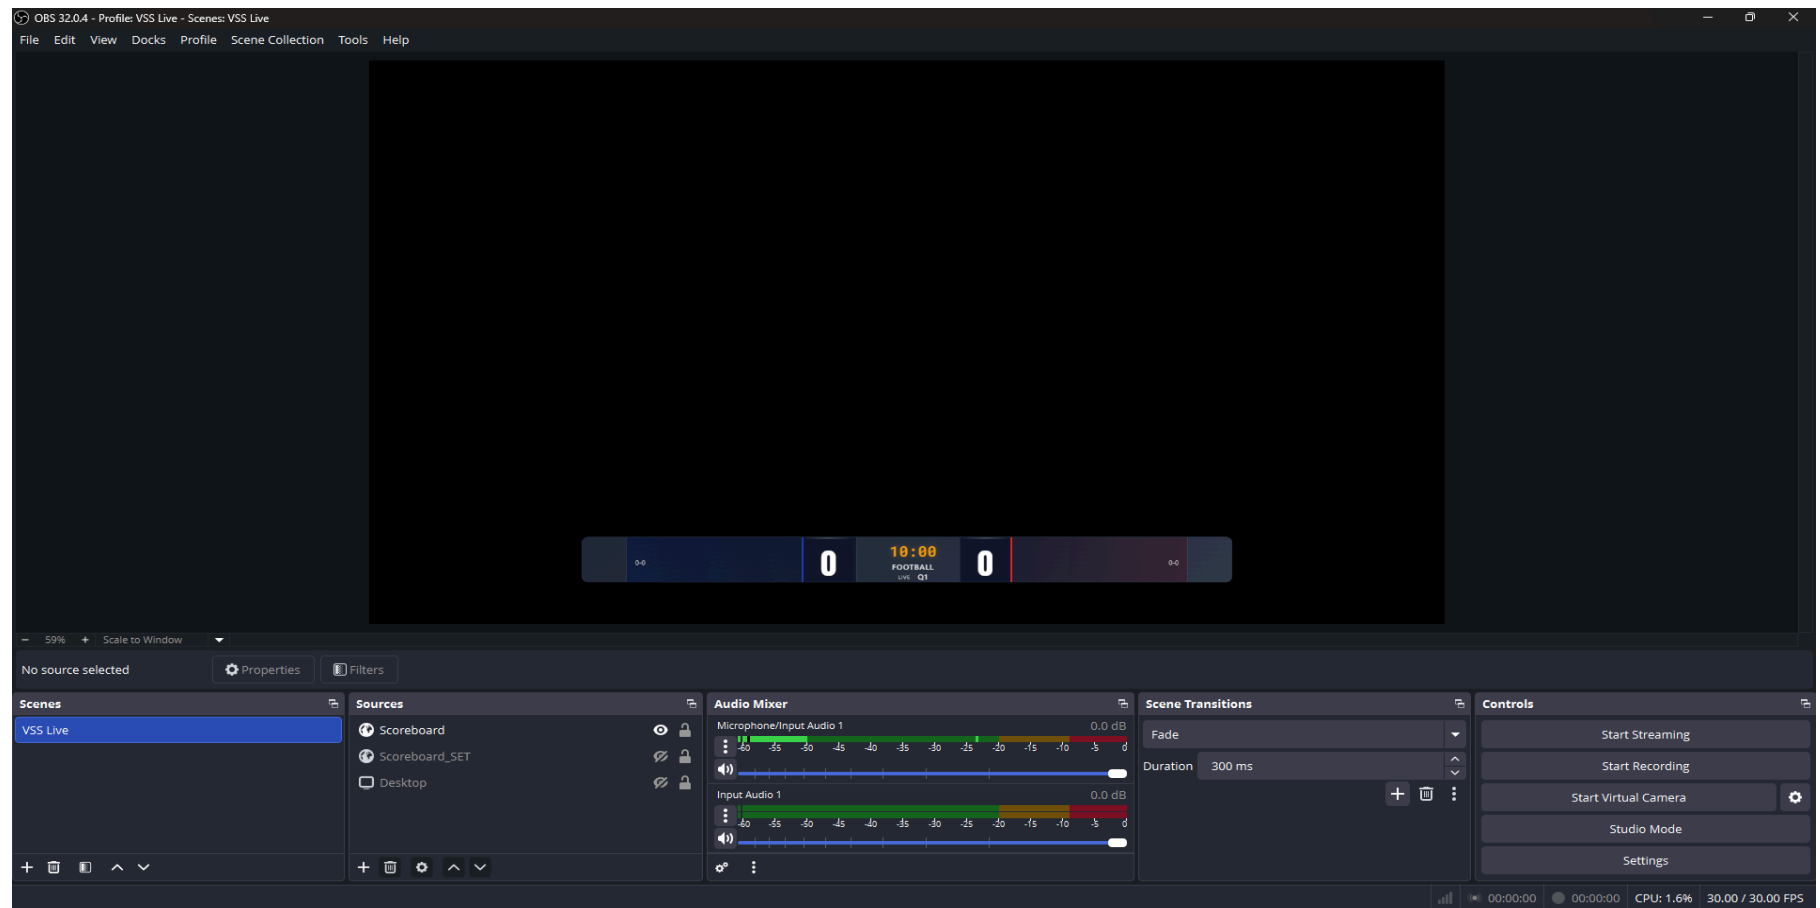

- **Select the *Local File* checkbox**
 - **Click *Browse***
- (See the next column for reference)
- **Set the preferred resolution:**
Width: 1920

- **Browse to the *VSS_Overlay* folder**
- **Select the *Scoreboard.html* file**

Height: 1080
(1920 × 1080 is the recommended standard)
➤ Click **OK**

➤ *Display the Scoreboard Template in OBS*

★Step3 - Setup Scoreboard Control Panel

Change Project Folder

Current folder: VSS_Over1ay

Config: config.json

Write status: OK (typing)

Clock: STOP

Version: 3.1

Auto write

Write now

Reset All

★ Scoreboard Sports Type supported:
Football / Basketball / Lacrosse / Volleyball / Hockey

Allow this website to view and copy files?

file:/// will be able to view the files inside "VSS_Overlay" and create its own copies.

1. Open the *VSS_Overlay* folder
2. Open the File on any browser (e.g., google chrome, safari...etc.):

VSS_Scoreboard_Control_Panel.html

Make sure to use the Latest version of Control Panel to use newest feature and UI experience

3. Click *Change Project Folder*
4. Select the *VSS_Overlay* folder as the default directory
(There is no need to navigate inside the folder).
5. Click *Allow* when prompted
6. Fill in the required information under:
 - a. *VSS Team Info*
 - b. *VSS Game Info*
 - c. *VSS Game Status*
 - d. *VSS Live Setting*

You may update this information during during the livestream or broadcast as needed

7. Any custom images (e.g., team logos) must be placed inside the *Photo* folder within the *VSS_Overlay* directory.

Real-Time Update Behavior

- The control panel will automatically perform real-time updates synchronized with the OBS Scoreboard.
- If you toggle **Auto Write** OFF, you will need to manually click "**Write Now**" each time to apply updates.
- By default, **Auto Write** is ON, and no changes are required.

Development Adjustment Suggestion Board

Enter any suggestion that needs to change or adjust (Feature, UI, BUG, Development...etc.):

Completed Feature: check Development / Completed Update Log below

Chase Notes:

Also needed are play clocks that can run alongside game clocks. Basketball, football, and lacrosse, to name a few. These shot clocks are crucial game info. These clocks should also have their own toggle to show and hide.

TODO:

Developing

A show/hide toggle for the graphic with an animation to make it appear and disappear on OBS

TODO:

Developing

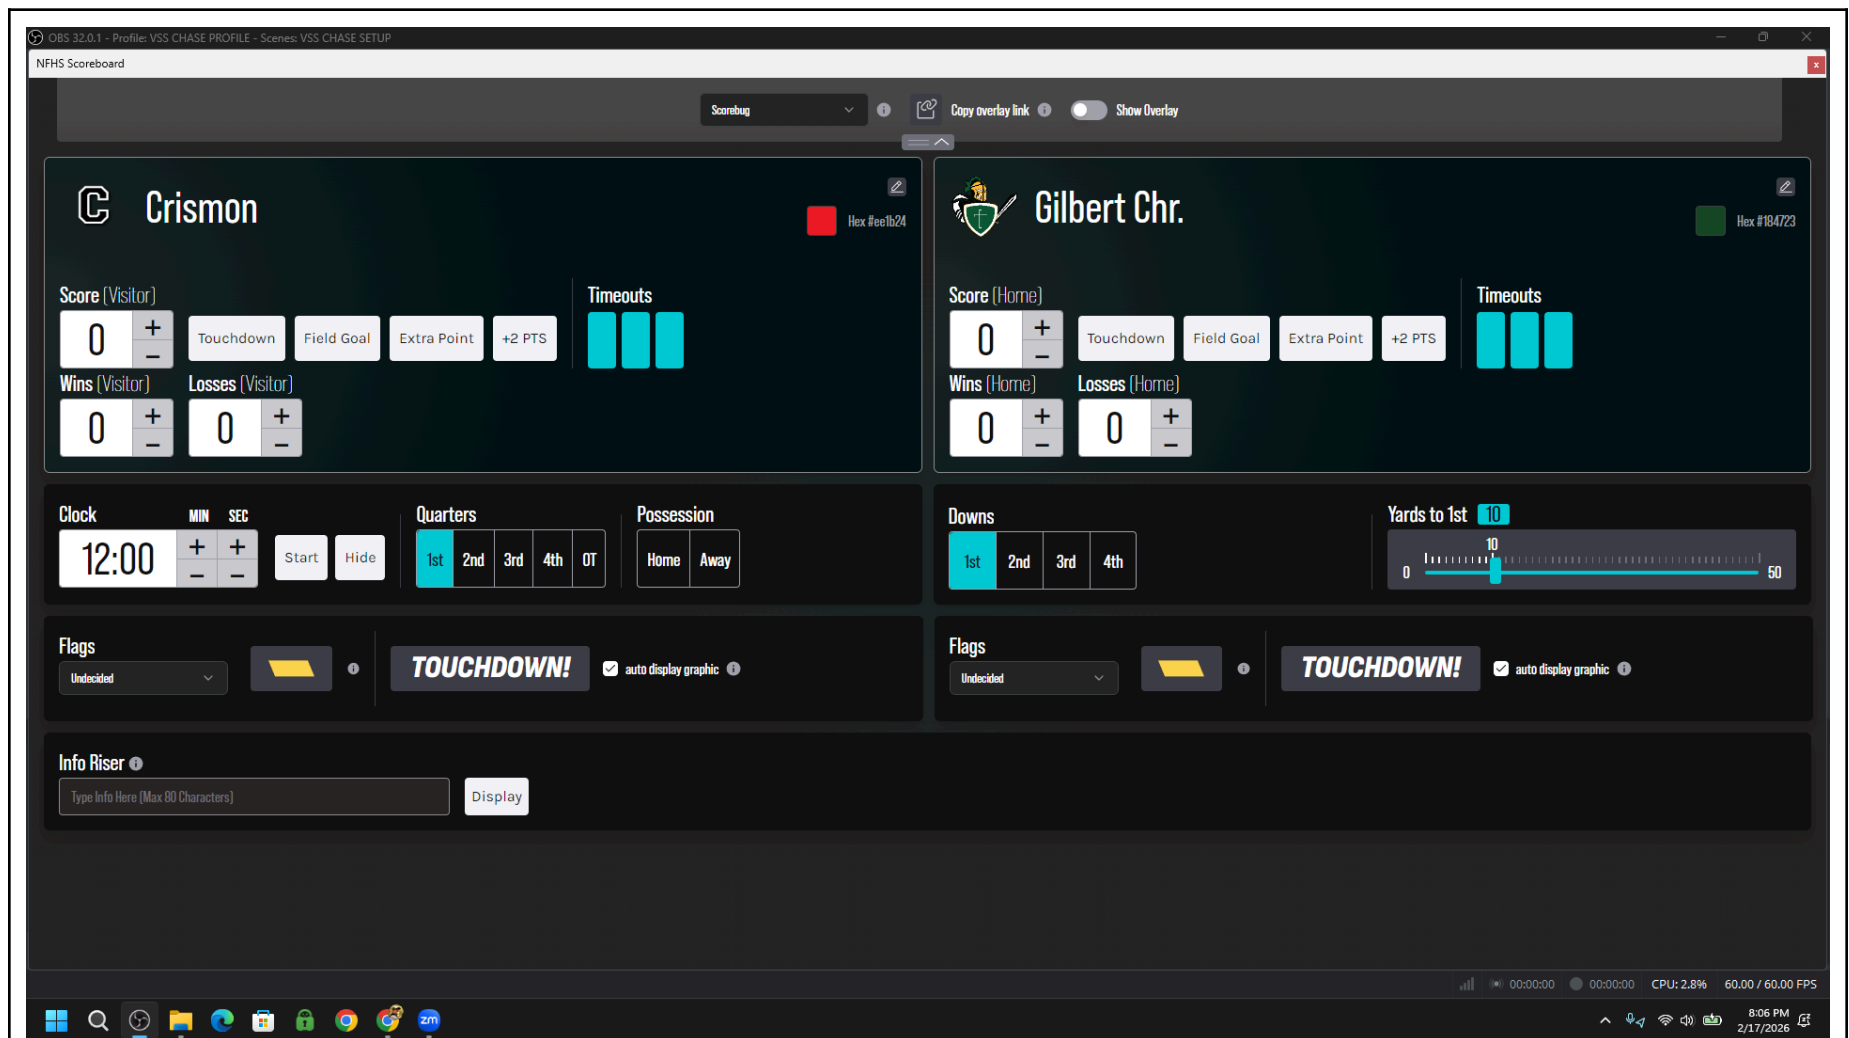

Scoring animations that play for each type of score. A TOUCHDOWN! Animation for when a touchdown is scored. A +3 or +2 animation whenever baskets are scored for basketball.

TODO:

not available to make animations

I really love how responsive the control panel is with the graphic is so great job there!

Here is a screengrab of the NFHS scoreboard control panel for football to give an example of the functionality needed:

Here is a recording to the full functionality of the NFHS Football scoreboard. It also has penalty indicators, timeout

animations, and possession indicators. Hopefully all this is of help to give you guys some more ideas on what you can do for these scoreboards!

Development / Completed Update Log

Raymond Notes:

UI could be updated to have Scoring presets for each sport example, +6, +1, and +3 for football, or +3, +2, and +1 increments for basketball so that we don't need to count up one at a time.

Completed:

Integrate the Scoring Presets in Control Panel version 3.3

The text for the team names and records are really small and tough to read if those could b/e resized. Also for team names if text could scale to accommodate longer team names like “Northwest Christian Academy” so that it will fit well that would be great.

Completed:

Integrate the Team Name and Team Record Font Size UI in Control Panel version 3.4

Integrate the Team Name and Team Record Font Size function in Scoreboard version 3.2

I don't see a reason to have the LIVE text next to the Q1 text

Completed:

remove Game Status in Control Panel version 3.3

remove Game Status in Scoreboard version 3.1

I would really like the ability to resize or reframe the images in the scorebug if possible. If the image I have is too small, I am going to have to go to another program and resize the image then reupload it into the scorebug.

Completed:

Integrate the Scale to resize the image in Control Panel version 4.0

Integrate the Scale to resize the image optimize in Scoreboard version 4.0

Optimize the newest Modern UI to easily control and have better visualization for use

* Download the Latest Version of both file from Github and update the previous patch

* Require to reload the new Scoreboard into OBS

Chase Notes 3/6/2026:

- Nice job with this update! A lot of things that are really good here. Keep up the good work!
- The logo scaling option doesn't allow you to go as big as I think it should be. It would be nice if you could uncap the limit of the sizing

- Play clocks/shot clocks are still needed in the sports that have them
- A way to show and hide the clocks would also be nice to implement so we can hide it if the time is off and don't want viewers to see
- Having the scoreboard say "football" on it is not necessary. If someone is on the stream they will already know the sport. If that could be removed and have period/quarter made a little larger in its place that would be great
- I think the game clock could also be made a bit bigger to fill in the empty space of the box that it is in as well
